Understanding SAP Readiness Check

Hands-On Exercise Guide — SAP S/4HANA Conversion Readiness

Version	1.0
Date	2026-08-01
Owner	Ananth Pai
Target	SAP S/4HANA 2023 SPS05

Duration ~15 Minutes	Level Beginner – Intermediate	Audience SAP Basis / Technical Consultants
-------------------------	----------------------------------	---

PUBLIC

1. Overview

This hands-on exercise guides you through the SAP Readiness Check process and the Simplification Items (SI) Check, both of which are essential steps before starting an SAP S/4HANA system conversion.

Learning Objectives

- Understand and run the RC_COLLECT_ANALYSIS_DATA report to collect system analysis data.
- Upload analysis data to me.sap.com/readinesscheck and generate a readiness report.
- Interpret the Readiness Check output to understand the S/4HANA conversion impact.
- Run the /SDF/RC_START_CHECK report to execute the Simplification Items check.
- Review and interpret SI check results and understand their severity levels.

1.1 Prerequisites

 BEFORE YOU BEGIN	Ensure all SAP Notes related to the Readiness Check and Simplification Items check have been implemented in your system before starting this exercise. Without these notes, the reports may not execute correctly or may produce incomplete results.
--	--

- **SAP S/4HANA Readiness Check notes** — implemented in the source SAP ECC system.
- **SE38 access** — authorization to execute ABAP reports.
- **Internet access** — required to upload data to me.sap.com.
- **Exercise files** — RC2AnalysisDataABA20260823.zip, Readiness check output.pdf, SAP S4HANA Conversion.zip (available in the exercise folder).

Exercise 1: Running the SAP Readiness Check

The SAP Readiness Check analyses your existing SAP ECC system and produces a report that highlights the impact areas, custom code changes, and data migration requirements for a conversion to SAP S/4HANA. In this exercise you will collect the analysis data on the system and then generate the report via the SAP online portal.

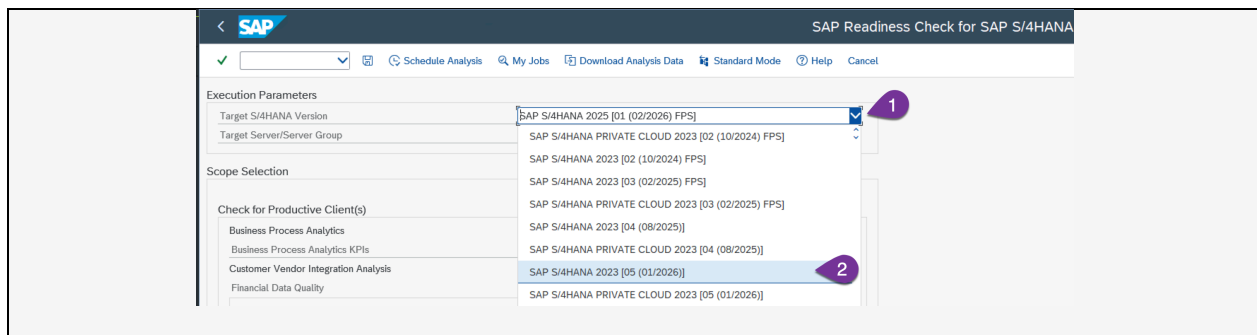

Step 1.1: Launch the Report in SE38

Transaction: SE38 (ABAP Editor)

1. Log on to your SAP ECC system.
2. Navigate to transaction SE38.
3. **In the Program field, enter:** RC_COLLECT_ANALYSIS_DATA
4. Press F8 or click the Execute button (▶) to run the report.

Step 1.2: Select the Target S/4HANA Version

1. On the selection screen, locate the Target Version field.
2. **Select:** SAP S/4HANA 2023 SPS05
This ensures the analysis is aligned with the intended conversion target.

Report selection screen — Target Version set to SAP S/4HANA 2023 SPS05

NOTE

Always confirm the target version with your project team before running the analysis. Running against a different target will produce results that are not applicable to your conversion project.

Step 1.3: Configure Analysis Options

The report offers several analysis categories. For this exercise, keep all options selected EXCEPT the three listed below. Deselect these items by un-checking their checkboxes:

- ✕ **Deselect:** Customer Vendor Integration Analysis
- ✕ **Deselect:** Financial Data Quality
- ✕ **Deselect:** Data Volume Management

All other analysis categories should remain selected.

Scope Selection

Check for Productive Client(s)

Analysis options — three items deselected as instructed

**TIP**

In a real customer engagement you would typically run all categories to get a complete picture. For this exercise the three categories above are excluded to reduce runtime.

Step 1.4: Schedule and Run the Analysis

1. Click the Schedule Analysis button.
2. Submit the job for background execution (recommended for production-sized systems).
3. Monitor the job in SM37 or wait for the completion notification.

Expected runtime: Varies by system size — typically 15–60 minutes on a training system.

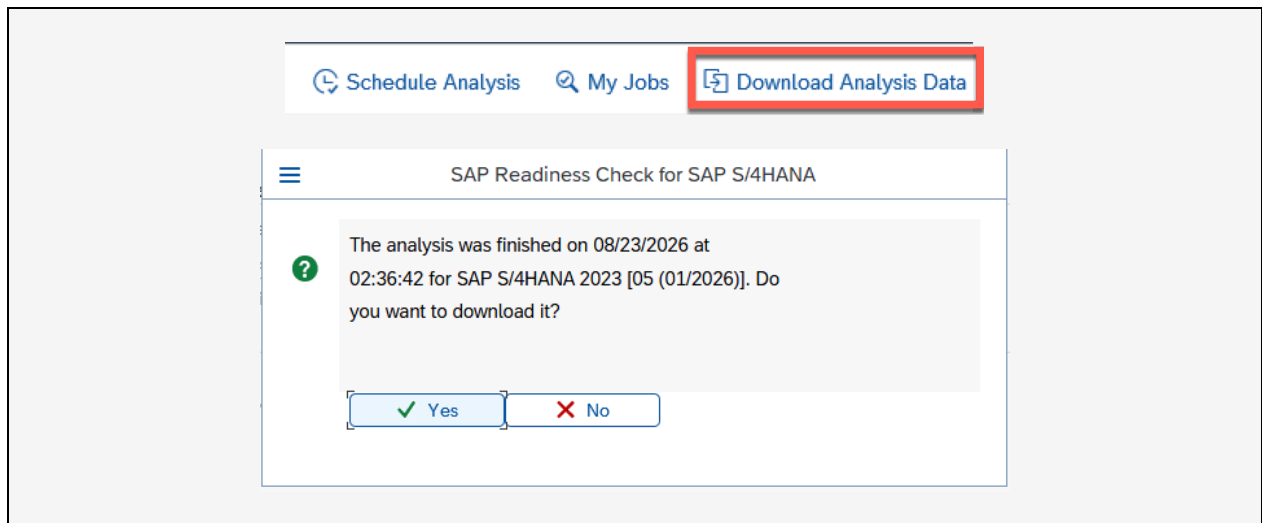

**Schedule Analysis****My Jobs****Download Analysis Data**

Schedule Analysis dialog — job submitted for background processing

Step 1.5: Download the Analysis Data

1. Once the background job has completed, return to SE38 and execute RC_COLLECT_ANALYSIS_DATA again.
2. On the selection screen, choose the option:
Download Analysis Data
3. The system will produce the latest completed run data as a ZIP file.
4. Save the ZIP file to your local workstation.

Exercise shortcut: If the job has not finished, use the pre-prepared file RC2AnalysisDataABA20260823.zip available in the exercise folder.

Download Analysis Data option selected — ZIP file saved to local workstation

Exercise 2: Generate the Readiness Check Report

With the analysis data ZIP file ready, you will now upload it to the SAP Readiness Check portal at [me.sap.com](https://me.sap.com/readinesscheck) to generate the interactive report. The portal processes the data and provides a detailed impact analysis for your S/4HANA conversion.

Step 2.1: Upload Data to the SAP Readiness Check Portal

1. Open a browser and navigate to: <https://me.sap.com/readinesscheck>
2. Log on using your SAP Universal ID credentials.
3. Click the Upload button and select the ZIP file you downloaded in Step 1.5.
Exercise file: RC2AnalysisDataABA20260823.zip
4. Click Submit / Upload to start the report generation.

Report generation typically takes several minutes.

You can navigate away and return later — the portal will notify you when the report is ready.

The screenshot shows the SAP Readiness Check portal interface. At the top, there's a header with the SAP logo and the text 'SAP Readiness Check Plan Your Digital Transformation Journey'. Below this, there's a 'Getting Started' section with a link to 'SAP Access to Customer Analyses'. The main section is titled 'Create Analysis' and contains a form with the following fields:

- Analysis Name: CLMDay Readiness check demo
- Customer: SAP AG (with a red box around 'Your customer number/name')
- Analysis File: RC2AnalysisDataABA20260823_1.zip (with a red box around 'The generated ZIP file' and a 'Browse...' button)
- Terms of Use: ☒ I acknowledge that I have read the SAP Readiness Check Disclaimer and SAP Readiness Check Terms of Use.
- Authorization: ☒ I acknowledge that all SAP employees may access and use the SAP Readiness Check Results for SAP business purposes like support, services, and marketing.

At the bottom of the form, there are 'Create' and 'Cancel' buttons. Below the form, there's a table titled 'Analyses' with the following columns: Name, Analysis Scenario, Created On, Analyzed System, and Analysis Status. The table contains one entry:

Name	Analysis Scenario	Created On	Analyzed System	Analysis Status
CLMDay2026 ReadinessCheckDemo	SAP S/4HANA Conversion	8/23/2026 8:20:12 AM	ABA (100)	Available

me.sap.com/readinesscheck — ZIP file uploaded and report generation in progress

NOTE

If you experience any issues uploading or accessing the portal, use the pre-generated output files provided in the exercise folder: Readiness check output.pdf and SAP S4HANA Conversion.zip.

Step 2.2: Review and Understand the Readiness Check Output

1. Once the report is generated, open it directly in the portal or download the ZIP.
2. Review the following key sections of the report:
 - **Custom Code Impact:** Lists custom ABAP objects that need adaptation for S/4HANA.
 - **Simplification Items:** Highlights SAP standard functionality that has changed or been removed.
 - **Business Process Impact:** Identifies processes affected by the data model changes.
 - **System Readiness:** Summarises technical prerequisites and missing SAP Notes.
3. Download the report ZIP and open the HTML or PDF output for offline review.

NOTE

If you cannot open the report, the output of this exercise is available for your understanding.
Readiness check output.pdf
And ***SAP S4HANA Conversion.zip***

TIP

The Readiness Check report is a living document — re-run it periodically as you remediate findings to track your progress towards conversion readiness.

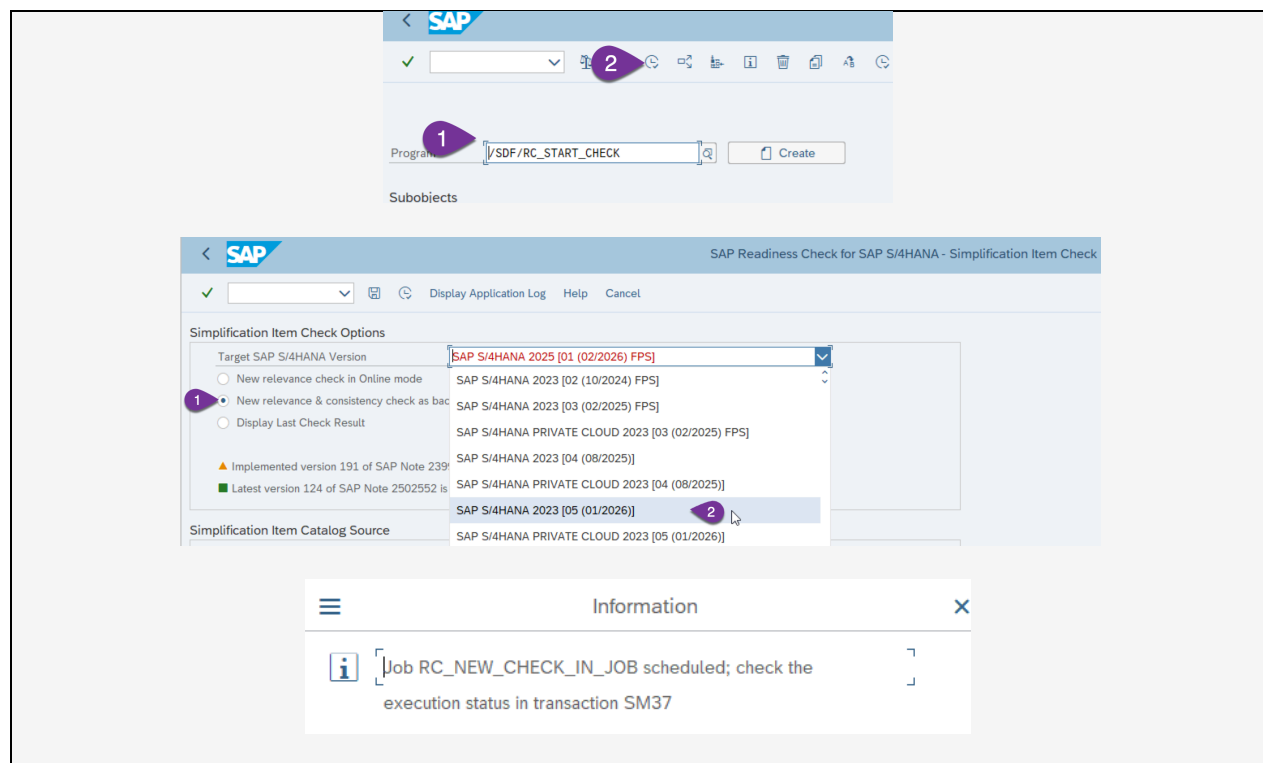

Exercise 3: Running the Simplification Items Check

Between SAP ECC and SAP S/4HANA there are significant changes to the data model, business logic, and technical architecture. The Simplification Items (SI) Check identifies these changes from a business process, data structure, and technical readiness perspective. All errors found by the SI Check must be resolved before the SAP Software Update Manager (SUM) tool can start the conversion.

Step 3.1: Run the Simplification Items Check

Transaction: SE38 (ABAP Editor)

1. In SE38, enter the program: /SDF/RC_START_CHECK
2. Press F8 or click Execute.
3. On the selection screen, set the Target Version to: SAP S/4HANA 2023 SPS05
4. Keep all other options at their default settings.
5. Execute the report and submit it as a background job.
6. Monitor the job in SM37 until it completes.

/SDF/RC_START_CHECK selection screen — target version and options configured

IMPORTANT

You must use the same target version when running the check AND when reviewing the results. Switching to a different target version during the review step will produce an empty result.

Step 3.2: Review the Simplification Items Check Results

1. Return to SE38 and execute /SDF/RC_START_CHECK again.
2. **On the selection screen, choose:** Display Last Check Result
3. **Ensure the Target Version is still:** SAP S/4HANA 2023 SPS05
4. Press F8 to display the results.

/SDF/RC_START_CHECK results — list of SI check items with severity levels

3.3 Understanding the Result Severity Levels

The SI Check categorises each finding by severity. The table below explains each level:

Severity Level	Description	Action Required
Abortion	Conversion will be blocked.	Must be resolved before SUM start.
Error	High-impact issue requiring remediation.	Must be resolved before SUM start.
Warning	Potential issue; may not block conversion.	Review and resolve where possible.
Information	Informational only; no direct impact on conversion.	Review and take note.

 EXAMPLE	SI2: MasterData BP → Severity: Abortion This item indicates that the Business Partner master data migration must be completed before conversion. The associated SAP Note provides step-by-step remediation guidance.
	SI22: GENERIC_CHECKS → Severity: Error (12 sub-items) Multiple generic checks have failed. Each sub-item has an associated SAP Note. Review and implement all relevant notes to resolve these errors.

3.4 Finding the Associated SAP Note

For every SI Check item, SAP provides a dedicated SAP Note that explains the issue and the required corrective action. The note number is displayed directly in the SI Check output. To resolve an item:

1. Identify the SI Check item and its severity in the results list.
2. Note the SAP Note number shown alongside the SI item.
3. Open the SAP Note in SAP Launchpad (<https://me.sap.com/notes>) and follow the instructions.
4. Implement the required configuration, data migration, or code change.
5. Re-run the SI Check to confirm the item is resolved.

Summary

✓ Exercise Complete — What You Have Learned

- Ran RC_COLLECT_ANALYSIS_DATA in SE38 to collect system readiness data.
- Configured the target version and selected analysis categories.
- Downloaded the analysis data ZIP and uploaded it to me.sap.com/readinesscheck.
- Generated and interpreted the Readiness Check report to understand conversion impacts.
- Ran /SDF/RC_START_CHECK to execute the Simplification Items check.
- Reviewed SI check results, understood severity levels (Abortion, Error, Warning, Information).
- Identified the path to resolve SI check items using the associated SAP Notes.

KEY TAKEAWAY

All Abortion and Error-level items found in the Simplification Items check **MUST** be resolved before starting the SAP Software Update Manager (SUM) tool for the S/4HANA conversion. Use the Readiness Check report to plan and track your remediation efforts.

Next Steps

- **Remediate all Abortion and Error SI items** using the SAP Notes referenced in the output.
- **Re-run both checks** after remediation to confirm a clean result.
- **Plan custom code adaptation** based on the Readiness Check custom code analysis report.
- **Review database and OS prerequisites** for the target S/4HANA system.
- **Engage SAP or a certified partner** for the full SUM-based S/4HANA conversion project.
