Agenda

01 Simplifying Private Cloud Operations
Overview of Private Cloud Workspace

02 Advancing with AI
AI Innovations & Outlook for Private Cloud Workspace
Demo

03 Low Touch Note Implementation

04 Key Takeaways

Cloud Operations reimagined

Private Cloud Workspace

8000+

customers

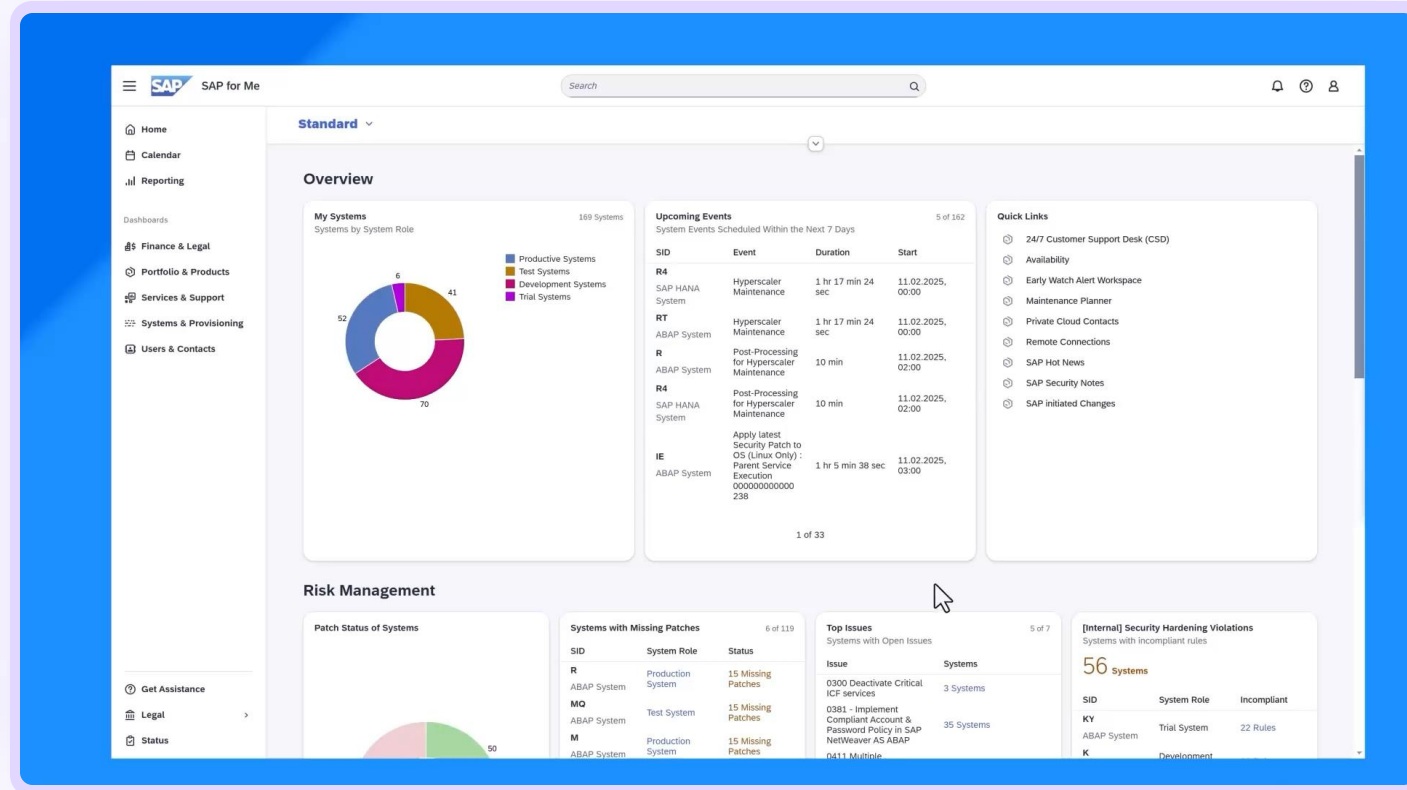

Private Cloud Workspace

Private Cloud Workspace

Monitor, orchestrate, and govern entire landscape in one place

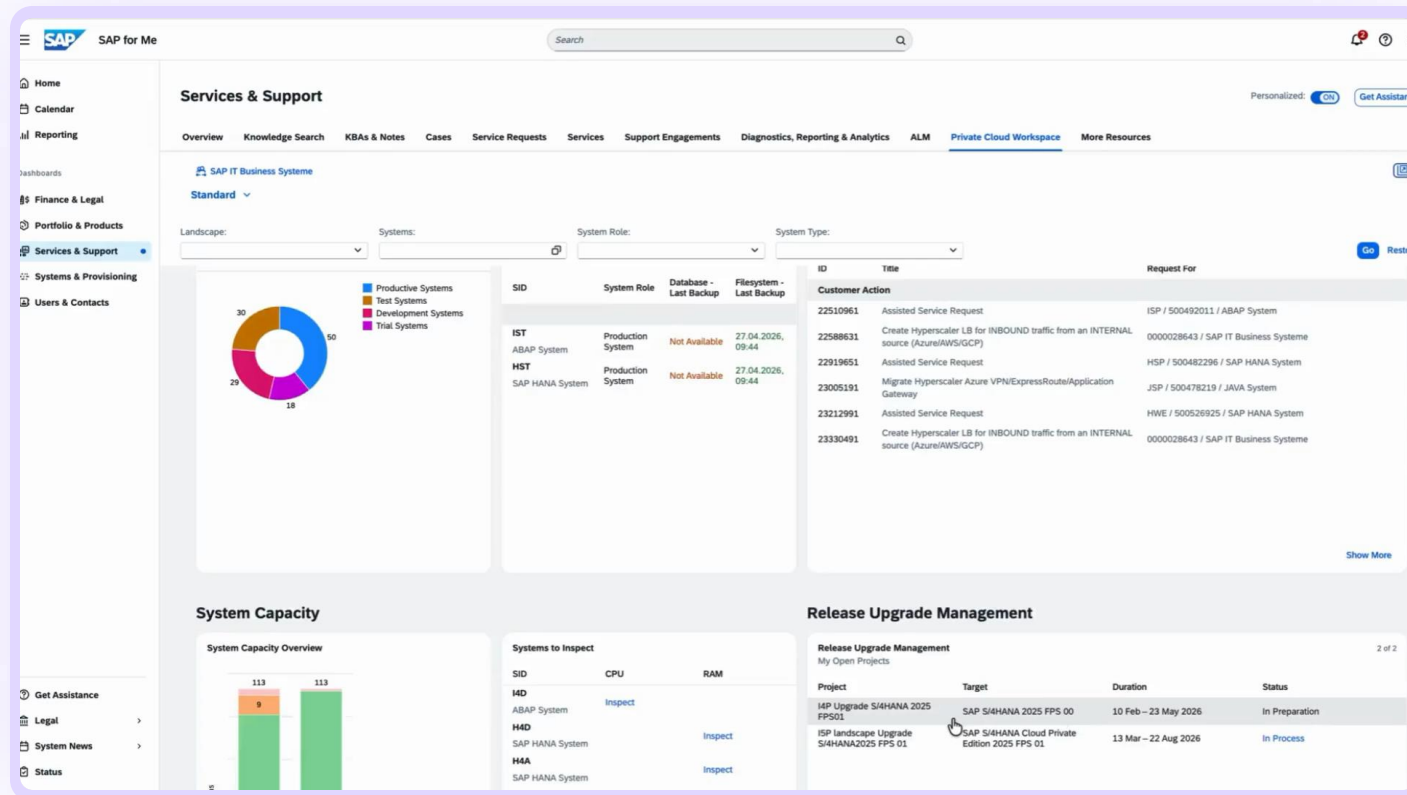

Private Cloud Workspace

Private Cloud Workspace

Accelerated and Scalable end-to-end upgrades

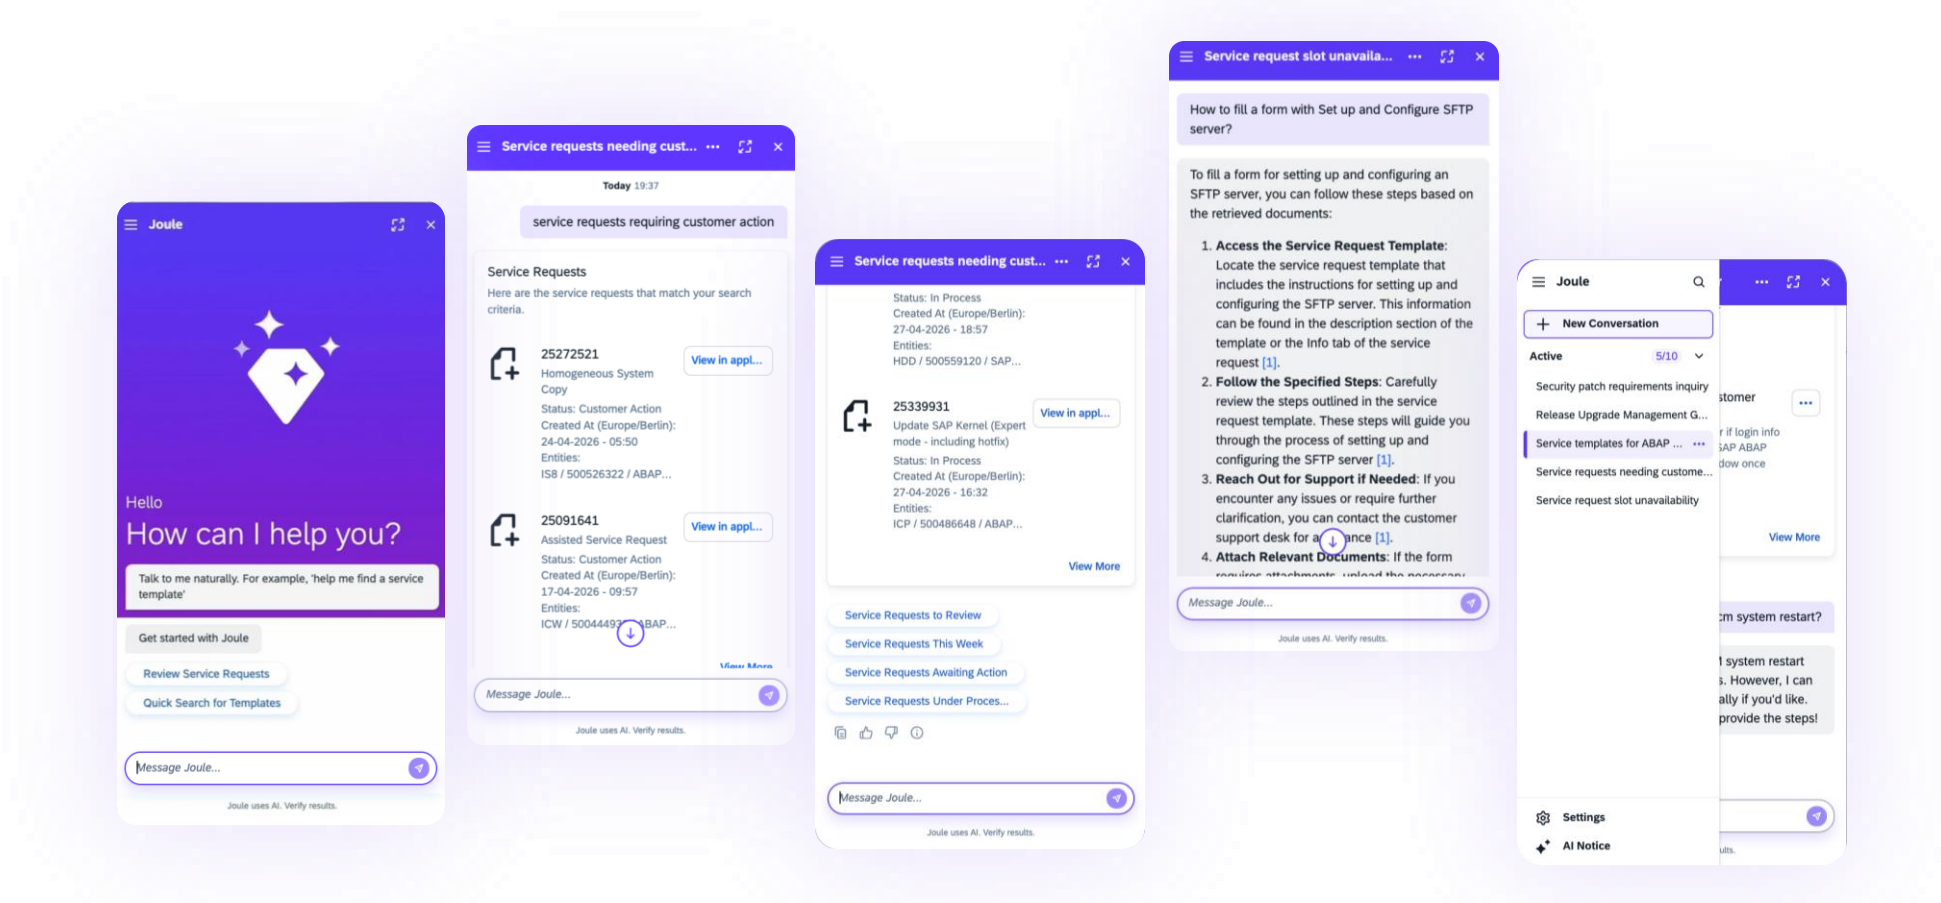

Private Cloud Workspace

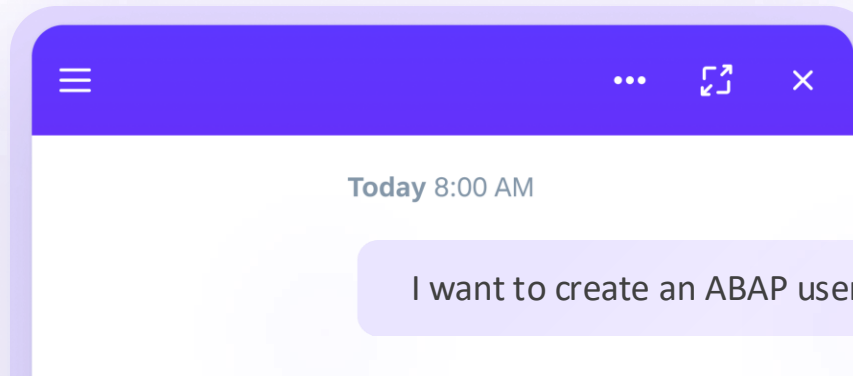

Private Cloud Workspace

Immediate answers across your landscape

Based on your requirement here are the recommended templates to create service request.

Create Initial User for ABAP System

Create technical or administration user(s) in client 000 of the selected ABAP system(s).

Important considerations:

...

Enable/Disable SAP* user in customer client for SAP ABAP System

Request to enable/disable SAP* user if login info lost or to only disable SAP* user in SAP ABAP system clients. You have 4-hour window once enabled.

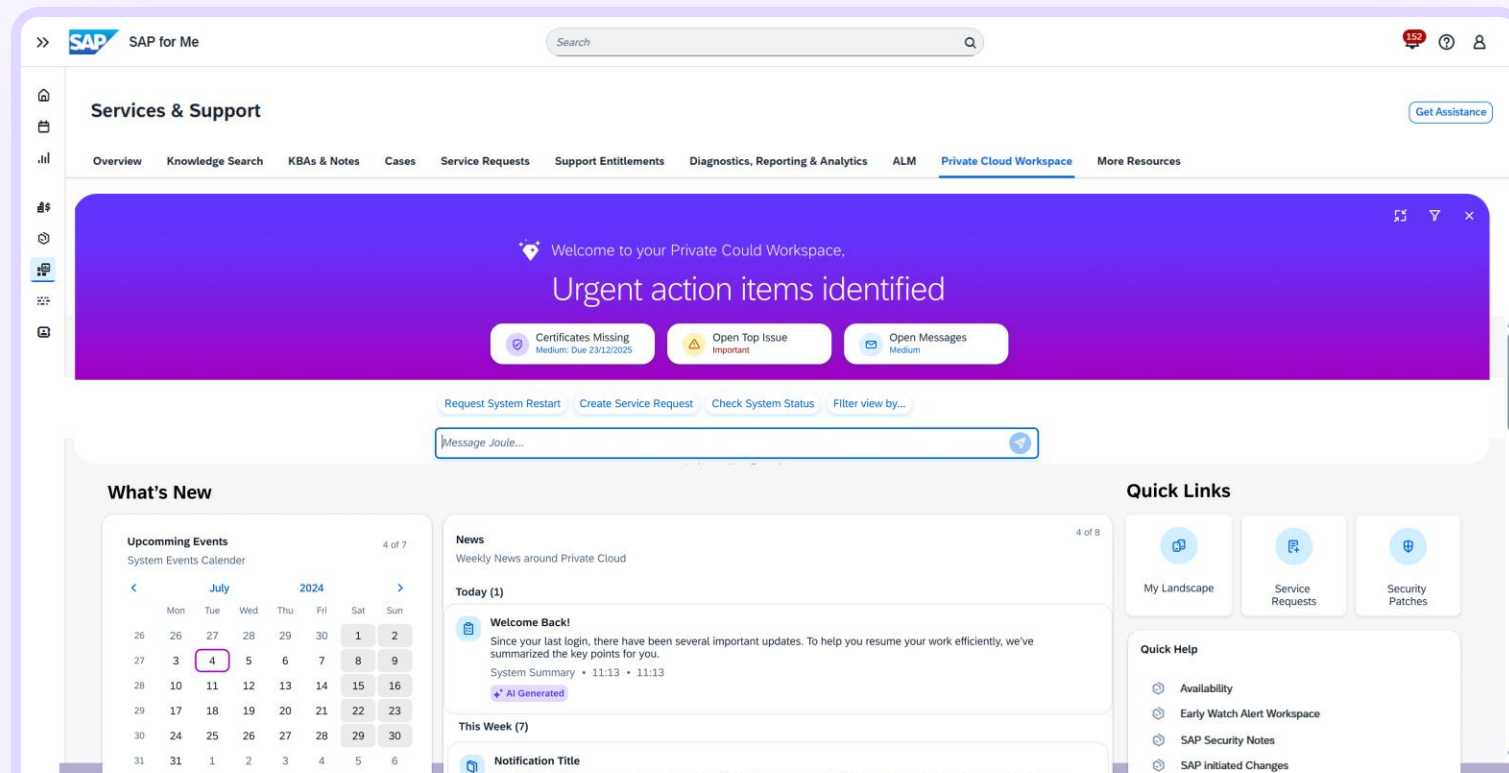

Message Joule...

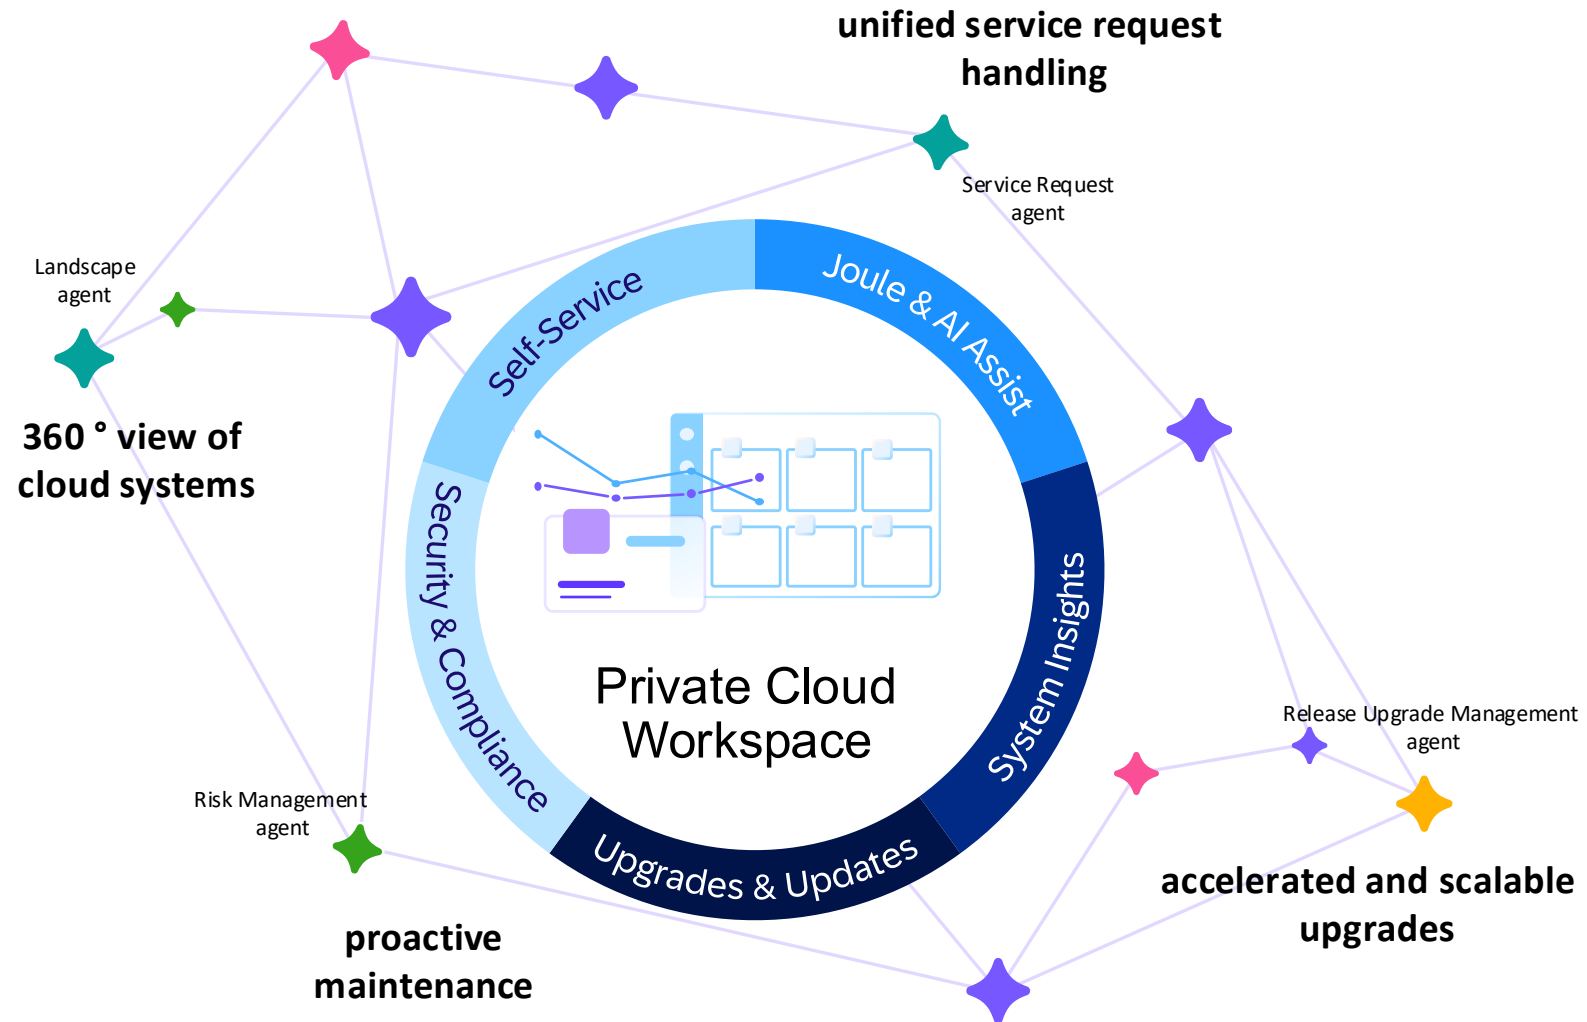

Joule uses AI, verify results.

Driven by
**your system
context**

Moving towards autonomous operations

Outcome-driven cloud operations

2026 Private Cloud Workspace AI Outlook

Building towards a unified, intelligent service experience and proactive landscape maintenance

Centralized Workspace Interaction

Intelligent Workspace Banner

Central interaction layer in the workspace that surfaces urgent actions, provides conversation starter prompts to start frequent actions and a Joule-powered input interface for natural language queries

Urgent Actions

Security Patches Due

Show systems with overdue or upcoming security patches, including patch urgency, affected systems and downtime requirements. Helps users identify which patches require immediate attention and the reason for urgency

Open Top Issues

Summarize most critical issues and suggest appropriate service template and downtime requirements to resolve and explain which top issues to prioritize first

Security Hardening Violations

Identify affected systems and configuration gaps, answer investigation questions on violations, and enable service request creation

Open Messages

Surface service request activities requiring attention, such as status changes, milestone progress, validation results, and other updates

Conversation Prompts

Check System Status

Summarize landscape health across key operational categories such as monitoring, certificates, backups, and connected agents to identify systems requiring inspection

Find Service

Allow users to search for the right service using intelligent template recommendation and create service request

Conversational AI Assistant

AI-Assisted Service Request Creation

Create service requests conversationally, with Joule identifying appropriate service request template, gathering or pre-filling required parameters based on service type, and preparing the request for scheduling and user review prior to submission

Search service template information to enable users ask about available services and understand details such as prerequisites, execution steps, estimated duration, and service scope before creating a service request.

Predict system selection to recommend relevant system(s) for required service based on the requested operation and landscape context

Support parameter fulfillment to assist users in identifying and completing required parameters for service requests or pre-filling relevant parameters where possible

Service Request Insights

Builds on existing capabilities by providing deeper insights into service requests, including progress, execution schedules, recent updates, and required customer actions across the landscape

Missing Certificates

Highlight certificates that are expired or nearing expiration, enabling users to identify certificates requiring update or configuration through relevant certificate management service request

Expanded FAQ Knowledge

Enable users to ask operational questions, including workspace functionalities and workflows, and new capabilities, supported by a continuously expanding knowledge base

Workspace Summary

Provides a daily overview of key updates and operational events across the workspace, delivered through News card and AI Assistant to help users understand what has happened during the day and prioritize actions

Summary highlights include:

Risk Management

Updates on new top issues, newly released or urgent security patches, security hardening violations requiring remediation

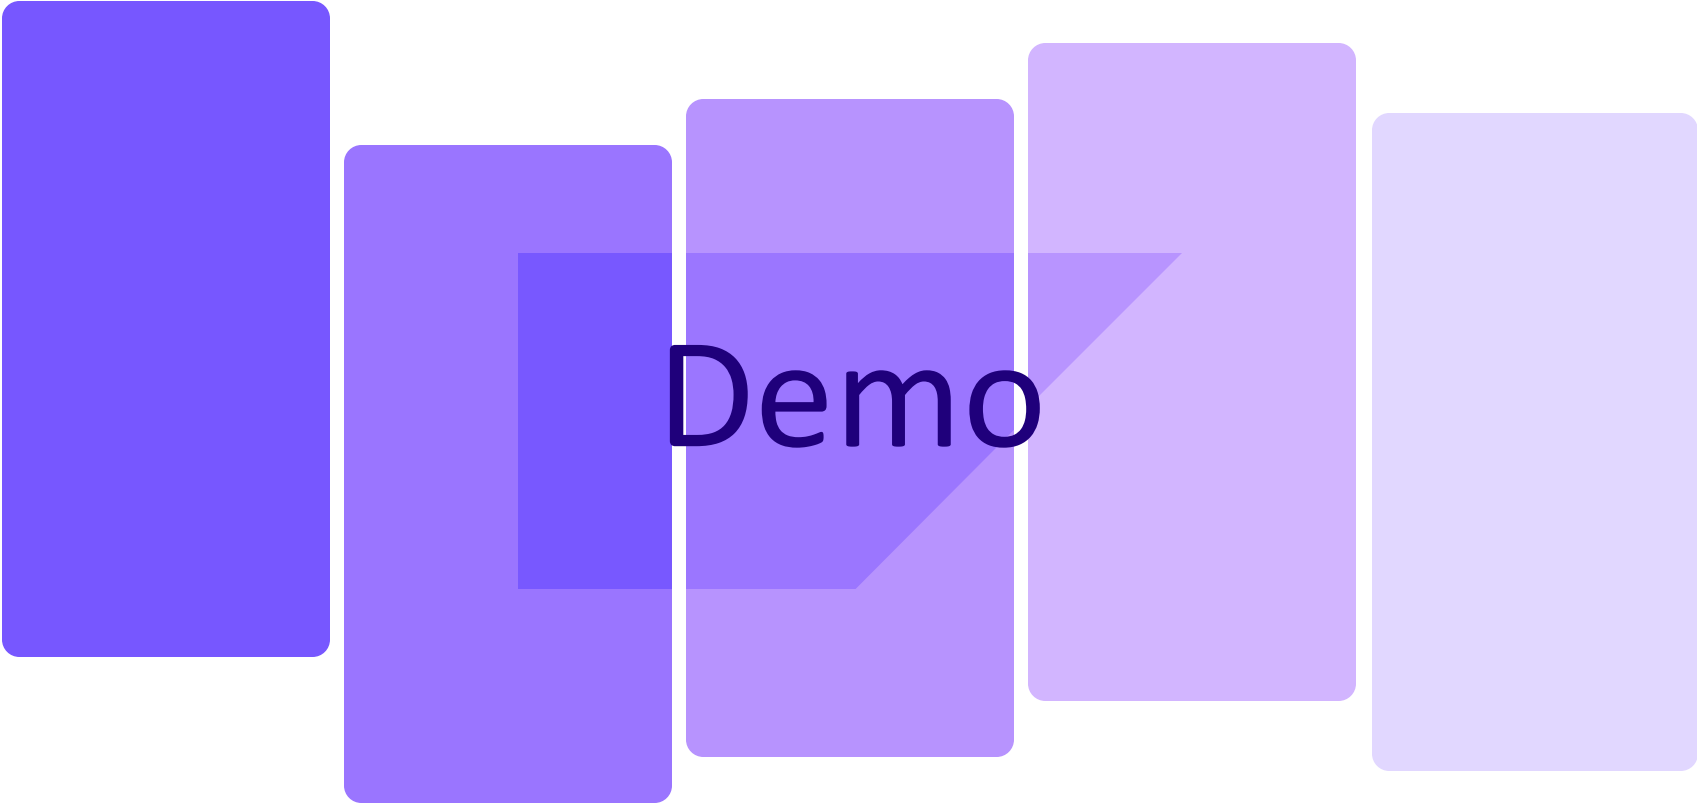

Service Requests

Summarizes service request activity including newly created requests, requests awaiting customer attention or action, and recently completed services

Landscape Management

Provides an overview of overall system landscape health, system availability and stability

Each update includes direct links to the relevant workspace objects, allowing quick navigation

Notes Recommendation & Implementation

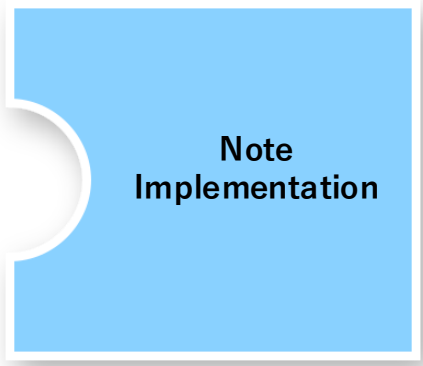

SAP Notes Solution Components

**Notes
Recommendation**

Maintenance Planner

AI-driven identification of
relevant SAP Notes for your system

**Note
Implementation**

Note Assistant

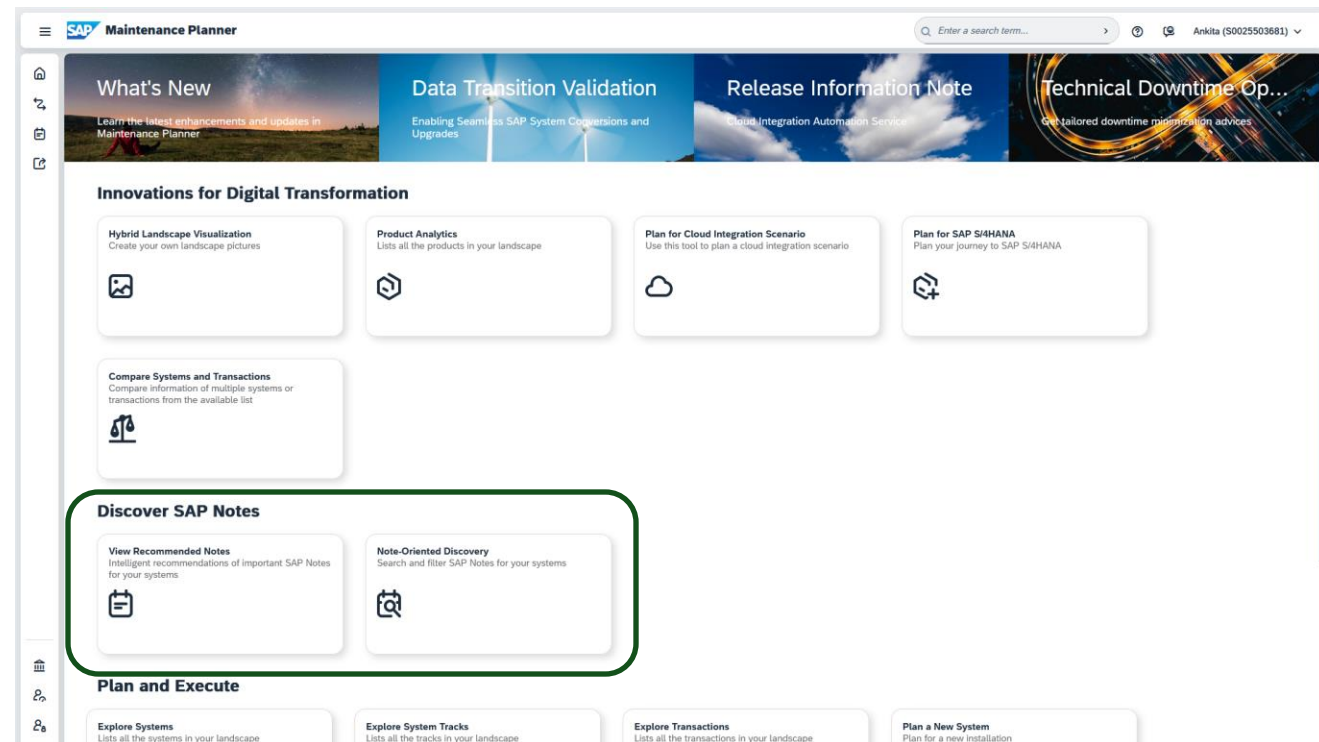

Batch Implementation of SAP Notes
using Note Assistant or Note
Analyzer

Notes Recommendations

Maintenance Planner

Key features:

- Tailored recommendations for ABAP, Java and HANA systems, based on your SAP system landscape and SAP Notes metadata.
- Save **Views** and share it with other users.
- **Profile-based access** for all the recommended notes.
- Covers wide variety of SAP Notes categories:
 - SAP Security Notes (including Kernel)
 - Hot News
 - Performance-Relevant Notes
 - Legal Change Notes
- Download & implement notes in the following formats:
 - XML for Note Analyzer to analyse and check the implementation status of required SAP Notes.
 - XML for Note Assistant to analyse and implement valid SAP Notes for the relevant systems.

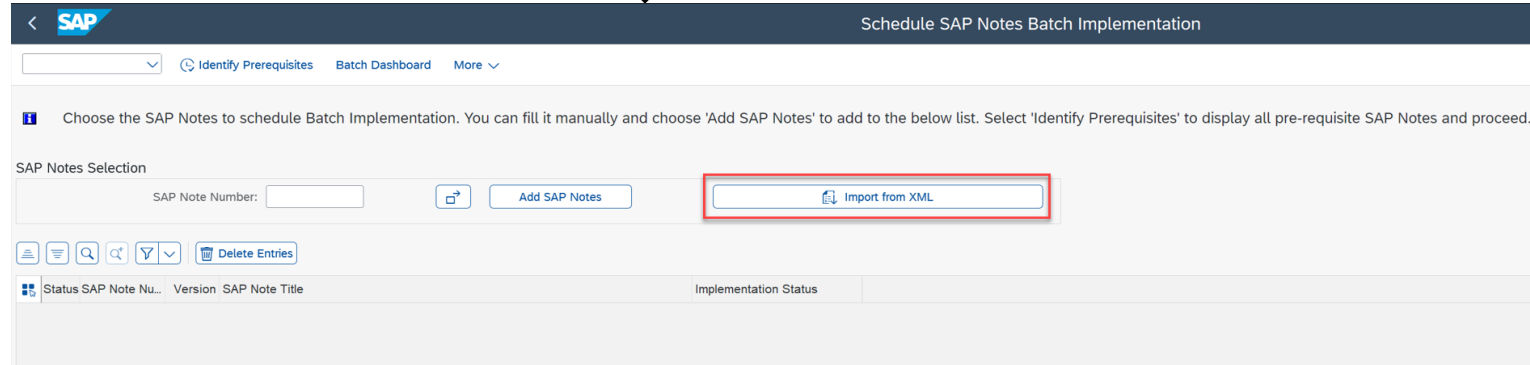

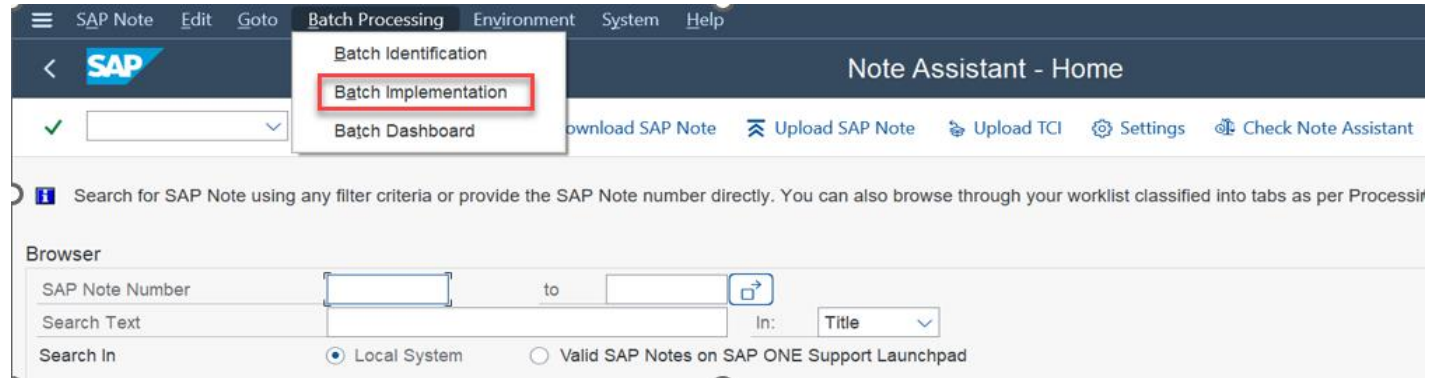

Batch Implementation

Note Assistant

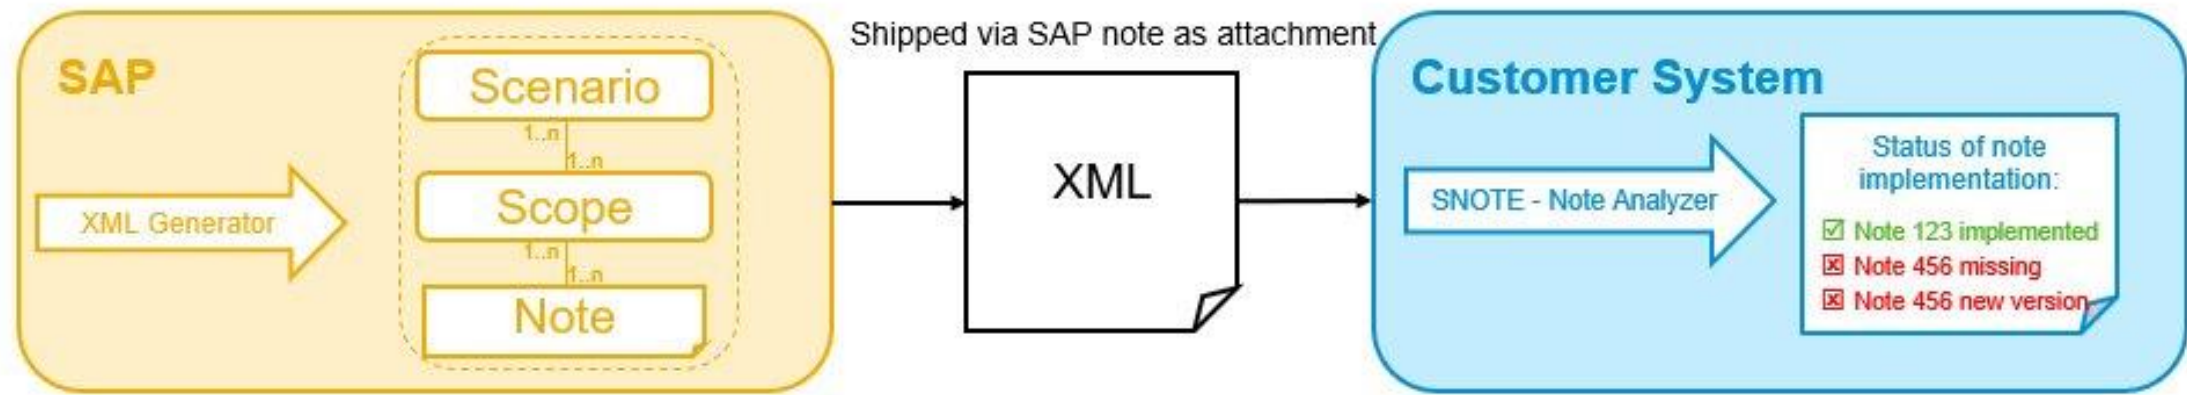

Key features:

- Schedule job for identification of Notes
- Schedule jobs to implement multiple SAP Notes in the background
- Automatic identification and implementation of prerequisite SAP Notes is supported
- Background implementation of TCI is possible
- Provision for handling Notes containing manual activities
- Dashboard view
- Entire process is logged for review

The feature is available with **SAP Note [3693201](#)**

Note Analyzer

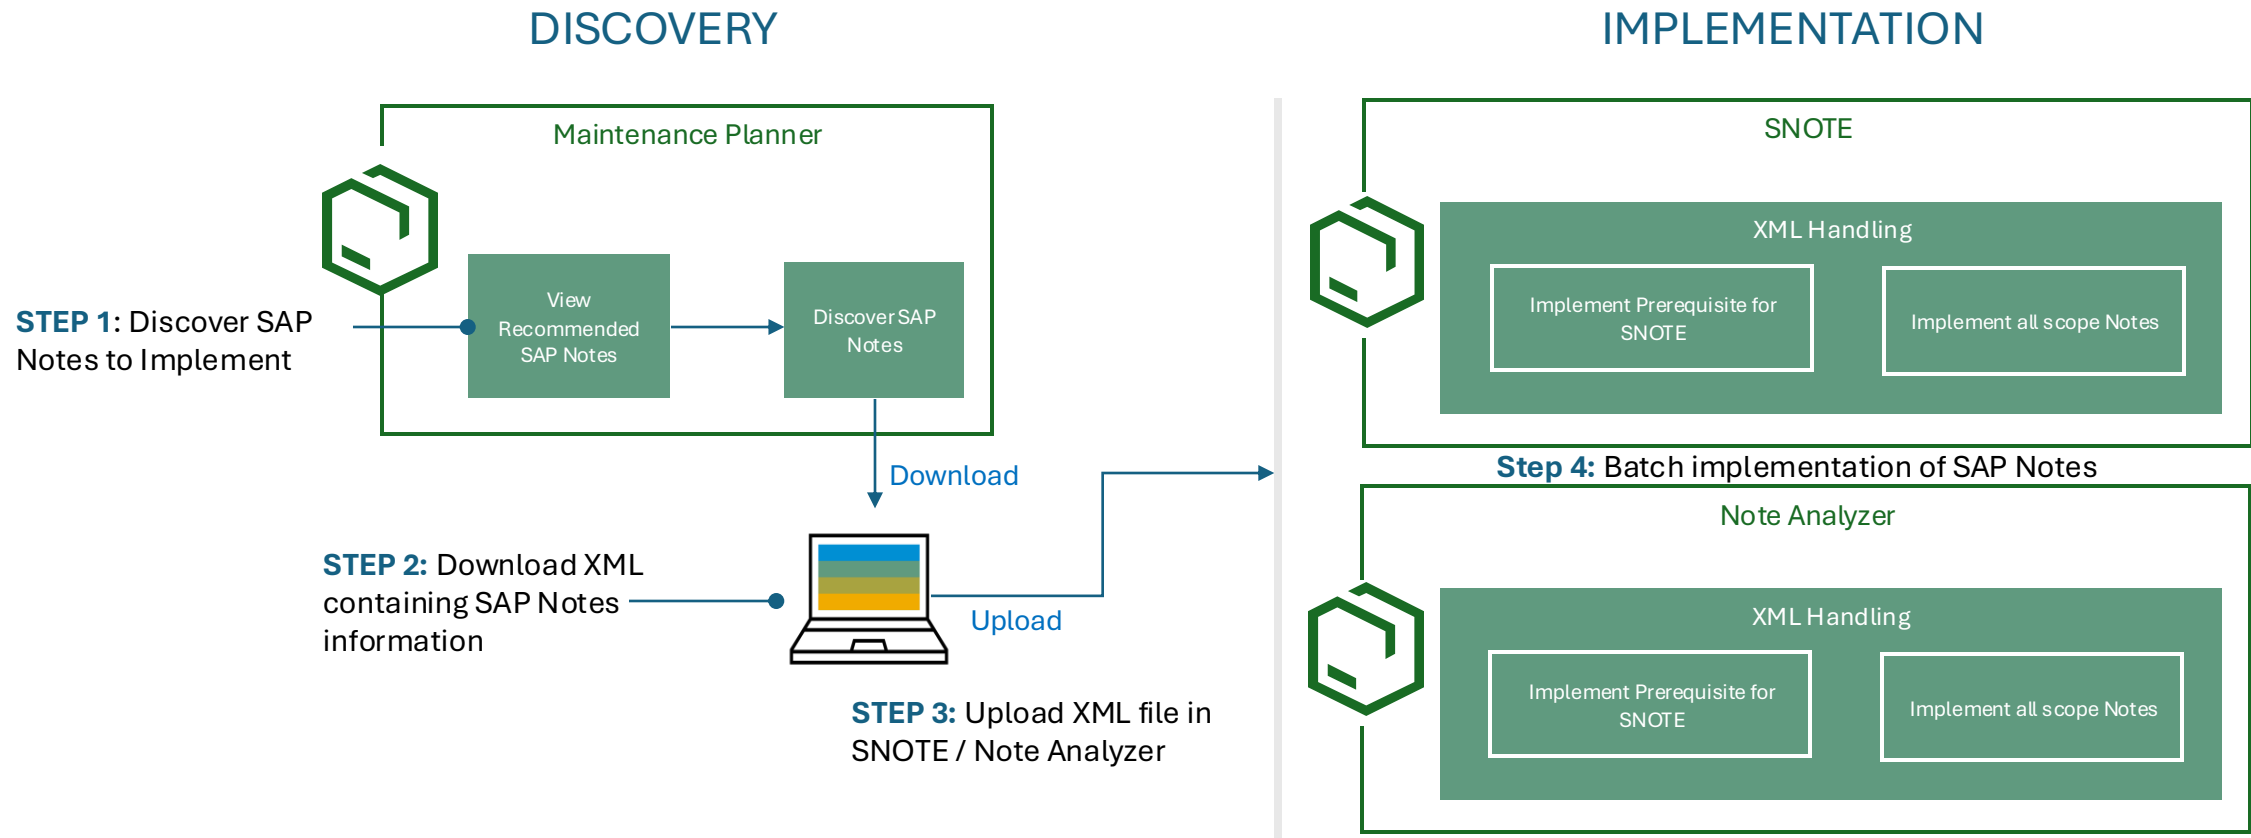

Engineers bundle notes for a certain topic area in scopes and scenarios.

In Regular Intervals:
Engineers creates XML containing several scopes & releases it to customer as an attachment in SAP Note

Customers (& Support Engineers) upload latest XML file in note analyzer(available in SNOTE) and get implementation overview of notes with one click.

Feedback Questions

1. Which categories of SAP Notes would you most want covered by Low Touch Notes Implementation?

- Security Notes
- Legal & Compliance Changes
- Performance & Stability Corrections
- Functional Corrections
- All Notes (no filter preference)
- Others

Feedback Questions

2. For each of the following automation scenarios, indicate your preference:

Scenario	Fully support	Support with conditions	Do not support
SAP installs critical notes (e.g. security) in an unattended fashion			
LTNI controls note consolidation across Test and Production systems			

Feedback Questions

3. How would you like to see AI play a role in SAP Note Implementation in the future? *(Select one)*

- I would welcome a **fully AI-agentic approach** (end-to-end automated recommendation and implementation)
- I prefer AI-assisted recommendations, **but with human approval** at key steps
- I prefer to keep **current manual/rule-based** processes
- I am unsure / need more information

Key Takeaways

Unified Operations

Visibility, orchestration and execution in one workspace

Intelligent Control

AI-assisted insights, guidance and decision support

LTNI

Implementation of critical SAP notes in a simplified low-touch way

Autonomous Operations

Progressing toward greater automation workflows
